Fast, accurate quoting software
plus photo realistic imaging,
simple technology
at its best!

Roof Estimating, Quoting & Visual Imaging Software

EXACT
ROOFING

ROOF ESTIMATING, QUOTING & VISUAL IMAGING SOFTWARE

The output includes a 3D drawing and details of the roof design in a dimensioned drawing that can be supplied to the client as part of the quote.
How it works

EXACT ROOFING is a roofing estimating and quoting program that takes the time and effort out of compiling roof cost estimates and quotes. The program takes the user through a series of easy steps to draw the roof's plan and builds a quote based on the user specified materials.
The Output, along with the quotation, includes a dimensioned plan drawing, a 3-Dimensional drawing plus several reports including a Master Quote, Bill Of Materials, and Labor Breakdown.

Other reports combine to provide a comprehensive roof design breakdown.

Input is via a **simple graphical interface** that allows the user to draw the plan view of the roof with the mouse and keyboard commands.

EXACT
ROOFING

ROOF ESTIMATING, QUOTING & VISUAL IMAGING SOFTWARE

• Easy to learn & use

• Enables you to create plans

• 3D Views of the roof designs

• Quotes based on the design

EXACT

Outputs Include:

- Customer Quote
- Fascia Labor Costs
- Cover Letter
- Terms and Conditions
- 3D Perspective

- Detailed Quote
- Roof Labor Costs
- Bill of Materials
- 2D Plan

Why use the Visual Imager?

The Visual Imager will create a photo-realistic image of the customer's
house or building. The Visual Imager provides the merchant with a
new and valuable marketing tool by showing, in separate pictures,
the complete range of the merchant's roofing products on the
customer's actual house or building.

The marketing is further enhanced with the Personal Visual Imager
that allows the merchant to supply the customers with a CD
containing customer's house or building. With the CD the customer's
can, in their own premises, continue to try out different combinations
of roofing, windows, doors and wall colours. The Visual Imager is, to
the customer, a complete exterior decorating tool. The customer can
look at their building or house from different angles, close up and
far away; and with every view, the Visual Imager is displaying the
merchant's roofing products.
